All,

Attached are the minutes from our last 2 LT/ST testing subteam meetings.
cheduled for 4/18/01 @ 8:30am CDT. The bridge is
Please let me know if I need to make any changes.

Thanks:

LT/ST TESTING SUBTEAM CC
4/4/01

Those in attendance were the following:

Jim Howard
Steve Blackburn
Tim Cannon
Kathy Wright
Curt Miller
Karen Albers
Peter Enane
Greg Bell
Wayne Heinmiller
Carol Gruchala

The following items were discussed:

1. Kathy has identified the SFID's needed and we have not purchased them. Sally will send a note to Ty to determine whether we are going to purchase these features or not.
2. Kathy will follow up with David on the status of the Lucent CSR for the double AMA entries.
3. The DMS100 CSR has been opened. We now need to keep it on Nortel's radar screen. The patch for the DMS10 will be loaded and Greg will test.
4. Karen has started the AMA section for the TRD.
5. Where the Charge Number > 10 digits and where there isn't a CPN or Charge Number, the SCP will block the call per the GR requirements. Carol will provide exact references for these scenarios. Kathy will test for a call incoming from another switch to see what is populated for the Charge Number.
6. Sally will contact Russ Jankowski on the status of the patch for international calls in the Siemens.

date 1/24/02 *Carol*

In attendance were the following:

Jim Howard
Carol Gruchala
Tim Cannon
Mary Beth Sommers
Greg Bell
Karen Albers
Curt Miller

The following items were discussed:

1. The patch that Nortel provided for the DMS10 has been loaded and tested in Alexandria. Karen stated that the AMA looked good. This issue is now closed. We are now waiting on the patch to be loaded in all DMS10 switches. Greg is waiting on a response from Nortel. Karen will provide a list to Greg with those switches identified that should receive the patch first.

2. There is another issue with the DMS10's. Karen identified the following AMA issue...

DMS10 switches in Michigan are recording sc220 cc047 (AIN default) for ULS-ST (LT/ST) originating IntraOffice traffic. The AMA is erroring out of the Billing System. All of the cc047s occurred when the called number was within the same NPA-NXX as the caller. Grace Sury (in EBAC) is working with the technicians to investigate the issue. We need some more clues. A switch records call code 047 (AIN default) when it would not normally create any AMA at all, but the AMA record is being forced by the AIN interaction. As far as we can tell, this is normal IntraOffice traffic and the switch should record cc006 for the calls. Some other calls in these switches did record sc220 cc006 when the calls originated and terminated within the same NPA-NXX. Grace Sury will contact Rob Anthony regarding this issue. However, Karen will monitor the issue for the team until it is resolved.

3. Sally will contact Ty Curtin to see if he wants to purchase SFID's to enable FlexANI to work for COCOTS.

4. Karen is continuing to work on the AMA section of the TRD.

5. Russ stated via VM that the Siemens patch appears to be working ok. It should be loading in all the Ameritech Siemens switches by the end of next week. Sally will follow up with Russ on a written description that was provided for the CSR.

6. Curt has not received any more trouble reports. At this time, it seems that the trouble reports are being kept at bay.

7. Sally will contact Kathy Cassady regarding the CSR UT15684 for the DMS100's.
